Main boom
Maximum lifting capacity:
220500 lb×10'6"

Main boom with fixed jib
Maximum lifting capacity:
64166 lb×30'

Main boom with fixed jib
Maximum lifting capacity:
17640 lb×70'

**Main boom with fixed jib
(with main load hook)**
Maximum lifting capacity:
17640 lb×60'
Main boom length:
101'9"-180'5"
Fixed jib length:
19'8"-59'

Note:

(1)The value given in the lifting capacity chart is the permissible maximum lifting capacity,which is obtained from the calculation when the load is suspended (according to the standard ANSI B30.5).The value can not exceed 75% of the overturning lifting capacity when the crane is on firm and flat ground (the max.gradient of the ground can not exceed 1%).Operating speed or any other condition may impose bad influences on safe operation of the crane.As a result,the crane operator must judge the conditions at hand and reduces the lifting load and operating speed correspondingly.

(2)The values in bold are the lifting capacity determined by the strength of the machine,while the values that are not in bold are the lifting capacity determined by the stability of the machine.

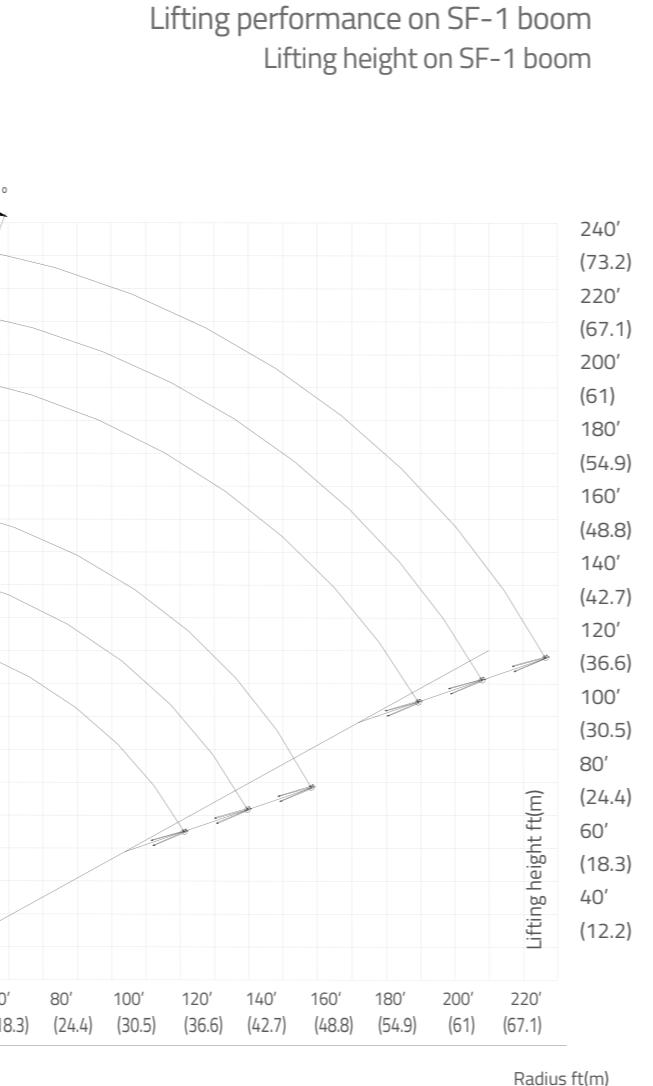

(3)The sign "*" in the chart indicates "lifting capacity/radius":Do not lift a load in the area which is not in the lifting capacity range,otherwise the crane may topple over.

(4)The value mentioned in the chart is the lifting capacity when the crane is working with 61740lb(28t)rear counterweight and 22050lb(10t) central counterweight in 360° range.

(5)The crawler carriers of the crane are extended completely.The combination of boom and guy lines must be carried out according to the requirements in the operator's manual .Follow the instructions in the operator's manual strictly when operating the machine.

(6)The value in the chart is the maximum lifting capacity of the crane, including the weight of lifting device,hook, and wire rope connected to the hook and so on.

(7)The value in the chart is the lifting capacity of the crane without a tip boom.When main boom is fitted with tip boom,the lifting capacity must include the weight of main load hook,wire rope,lifting device as well as the weight of tip boom,auxiliary hook, and wire rope.

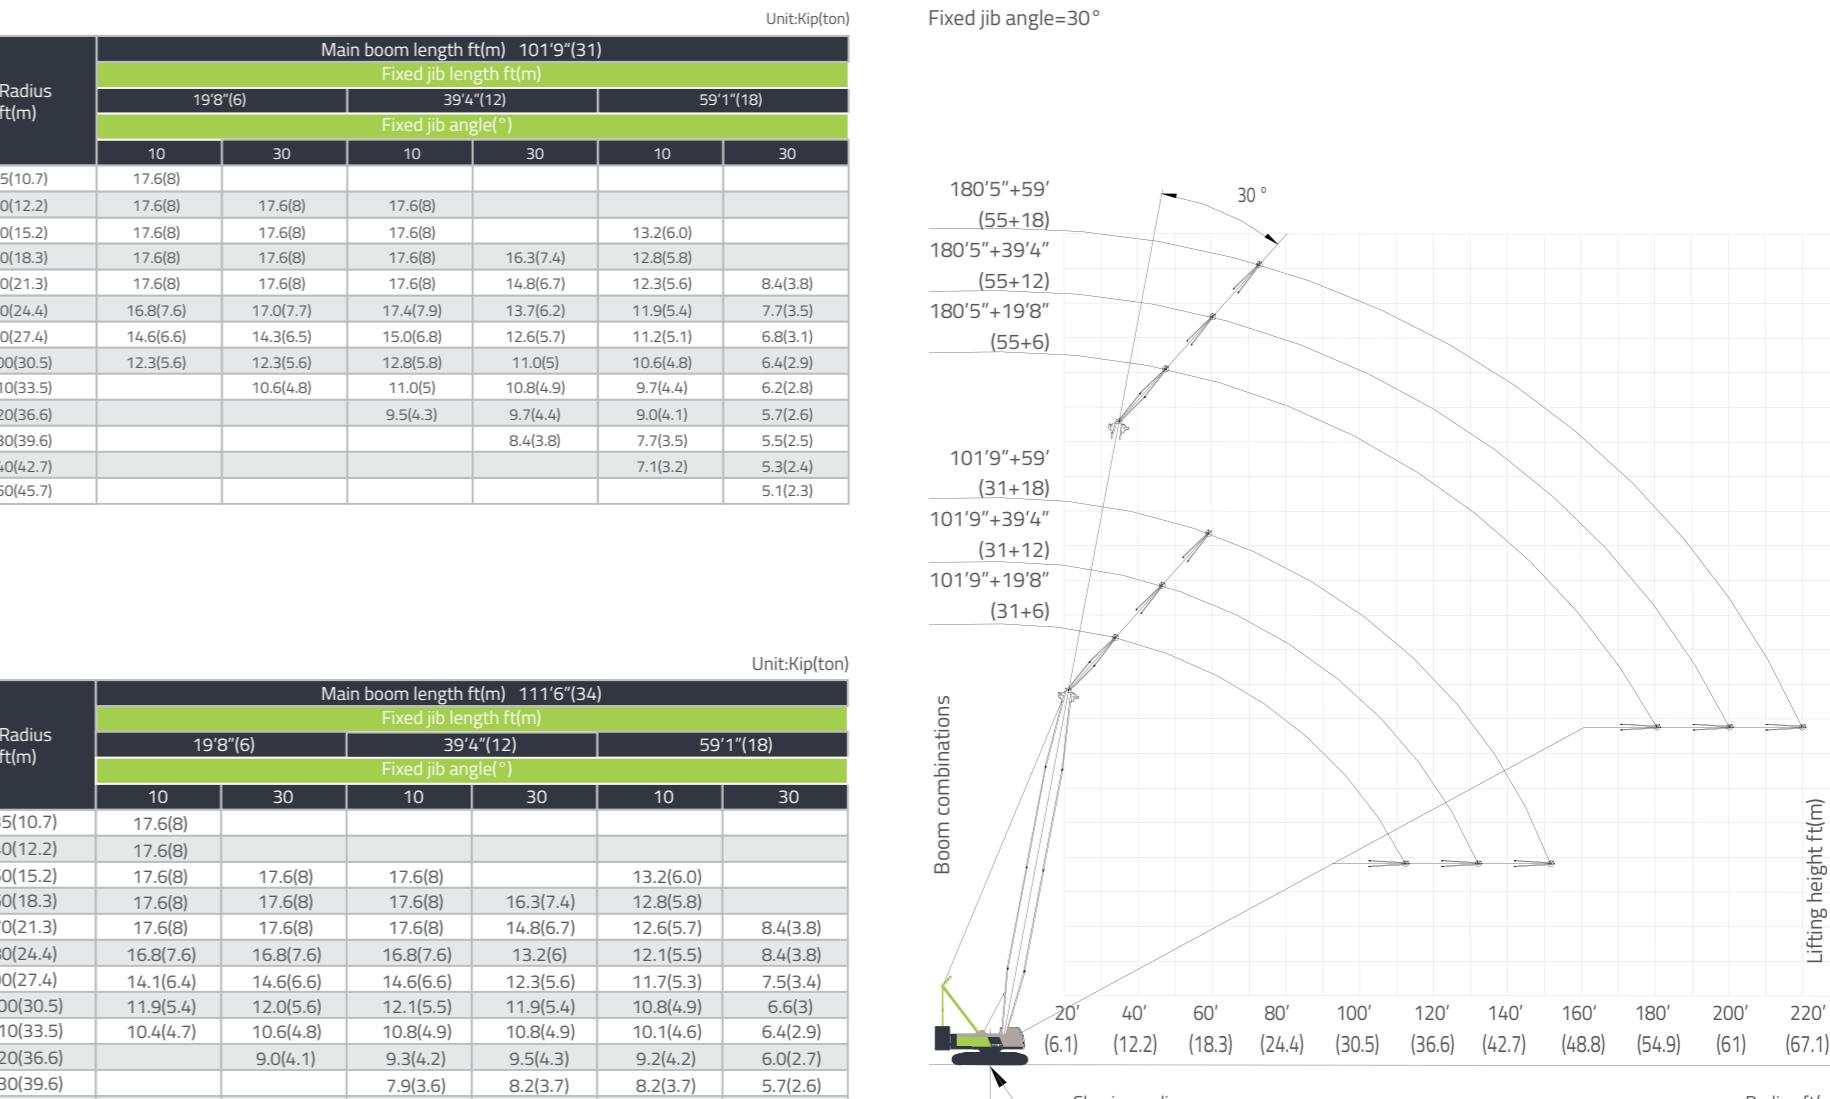

Note:The deflection of boom is not taken into consideration.

Transportation

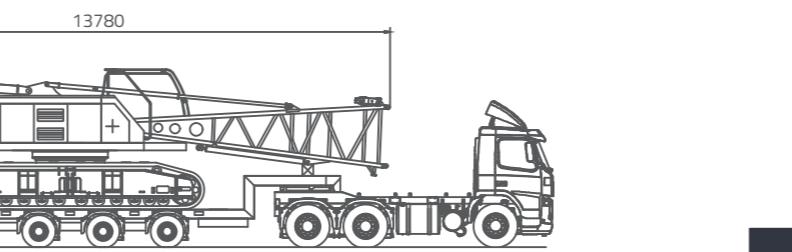

Powerful self-assembly and dismantling function

The crane can assemble and dismantle the rear counterweight, central counterweight, and crawler carriers by itself. In assembly mode, the load moment limiter must monitor the status of mounting cylinder in real time when it is used to lift the load so as to ensure safe crane operation. Raise the whole vehicle by four support cylinders to unload the whole vehicle from the low-loader. Assembly and dismantling of crawler carriers and central counterweight, and the piling of rear counterweight plates are performed via the mounting cylinder on main boom pivot section. Assemble and dismantle the rear counterweight via two counterweight lifting cylinders on the rear part of the slewing table.

Loading vehicle - transportation as a whole

The basic machine mainly consists of main boom pivot section, hoisting winches 1 and 2 (including wire rope), derrick winch (including wire rope and derrick pulley block), left and right crawler carriers, etc. The designed transport width is 11'2" (3.4m) and the weight is 99887lb (45.3mt).
